TITLE OF THE PROJECT

Guest House Management

SUBMITTED BY

Surya Bhan

Enrollment No.: **KA2K22/132870059**

DATE OF SUBMISSION

10/08/2024

Under The Guidance Of: ***.Mr. Shivchand Sir***

Submitted in partial fulfillment of the requirements for
qualifying Bsc.

Jeevandeep Mahavidyalaya
Affiliated to MGKVP Varanasi
Bada Lalpur ,P.O.Lamhi,Varanasi

Project certificate

This is to certify that the Project/Dissertation entitled, Guest House Management is a bona fide work done by **Surya Bhan** (Enrollment No. **KA2K22/132870059**) in partial fulfillment of Bsc examination has been carried out under my direct supervision and guidance. This report or a similar report on the topic has not been submitted for any other examination and does not form part of any other course undergone by the candidate.

Project Title

Introduction

Welcome to **GUEST HOUSE MANAGEMENT**. This project is for many purposes because I want to give full satisfaction of the user.

In my project I provide many facilities to user. In Guest House Management it is very difficult to manage all things but with the help of my software it becomes very easy to handle. It saves our time and paper work.

So we consider the above problem and make this software. In this software you store all kinds of information like-

- User can Stuff entry like rooms , Products and services entry
- Product entry,product unit entry
- Sale records
- Reporting of sale customer ,product and Service wise
- Sell ledger
- Details reporting

Objective of the Project

Our consideration while developing this software was to achieve the following goals:-

- 1- This software is for Guest House Management so it provides those facilities, which is used in any Startup Guest House.
- 2- It also saves the valuable time of the Guest House owner and lots of paper works.
- 3- This will save lots of effort of the user. He/She is able to manage lots of information after using this software and also able for seeing in different angles.
- 4- User can manage all the records very easily. You can generate all kinds of reports like bundle Product Sale, Services Sale receiving, customer detail and many more reports for management.

We also try to maintain security of data. User cannot enter directly to the software without using login and password

Project Category

This project belongs to the category of application software as use the applications of Guest House Management can it. It is a desktop application, At a time only One user can use it. It is a type of commercial software so terms and conditions are provides by the vender to buyer.

Software Platform

Implementation Platform

The following software is required.

- Operating System -Window 7
- Back End -MS-Access
- Front End -Visual Basic .Net

Development Platform

The following S/W was used n developing the system.

- Operating System -Window 7
- Back End -MS-Access
- Front End -VB.Net

Hardware Platform

Development platform

The following H/W components were used in developing the system project.

RAM	- more than 64 MB
HDD	- 20 GB or greater
Monitor	- EGA/VGA
Keyboard	- Input Device
Mouse	- As a pointer Device
Processor	- Pentium Minx

Implementation Platform

The following H/W is required

RAM	- more than 64 MB
HDD	- 20 GB or greater
Monitor	-EGA/VGA
Keyboard	-Input Device
Mouse	- As a pointing device
Processor	- Pentium Minx

Feasibility Study

It has very important place in the study of any software because if the project are not feasible then working on this working on this software is not a good work.

So I conducted the feasibility study in order to check out whether our software “GUEST HOUSE MANAGEMENT” is feasible or not. So we study about thee types of feasibility:-

- Economic Feasibility
- Technical Feasibility
- Operational Feasibility

So brief description of above are following

1 Economic Feasibility:-

In this study, I was concerned about broad range of factors. Our software has no need of any other equipment or software. It saves very much time and lots of manual work. It also saves the paper work of the person.

So, in short we can say that it is economic feasible software and saves lots of expenses of the person and time as well.

2 Technical Feasibility:-

In technical feasibility we studied that the system is technical feasible or not. If system is not feasible then, a system analyst takes a decision about software that will be proceeding out or not.

So, we take care of that our software is overall technically feasible. I take care of the development and technology of the Varanasi region for ensuring availability of the hardware and software needs for implementation of this project and that is minimal.

3 Operational feasibility:-

Our software is user friendly. So a person who does not have any technical background can operate this software, prior knowledge of computer is not mandatory for operating the software. Icons menus and its options describing its meaning itself, input and output form are designed in user friendly way for providing proper instructions with user.

So we specially take care of that software is operational feasible.

Testing

Testing phase is one of the important phase in between developed and implementation phase. We perform testing to ensure code optimization and to ensure accuracy and validity of entered data.

The system development phases involve many activities where chances for occurrence of human errors are enormous. Logical error, carelessness, improper communication, the need to hurry through the whole process of software development due to time constraint, cost constraints etc. provide ways for errors to creep in. The system must be tested thoroughly so that such error to creep in. The system must be tested thoroughly so that such error are detected and corrected as early as possible. A successful test is one that uncovers every possible error.

There are following testing methods which are below:-

1 BLACK BOX TESTING:-

In black box testing we checked modules by giving test data prepared by keeping all possibilities.

2 UNIT TESTING:-

In unit testing each module checked for following:

- 1- Interface
- 2- Local data structure
- 3- Boundary conditions
- 4- Independents paths
- 5- Error handling paths

3 SYSTEM TESTING:-

Modules added to project in incremental approach and overall testing performed on system to evaluate its overall performance with stated requirement of user.

4 WHITE BOX TESTING:-

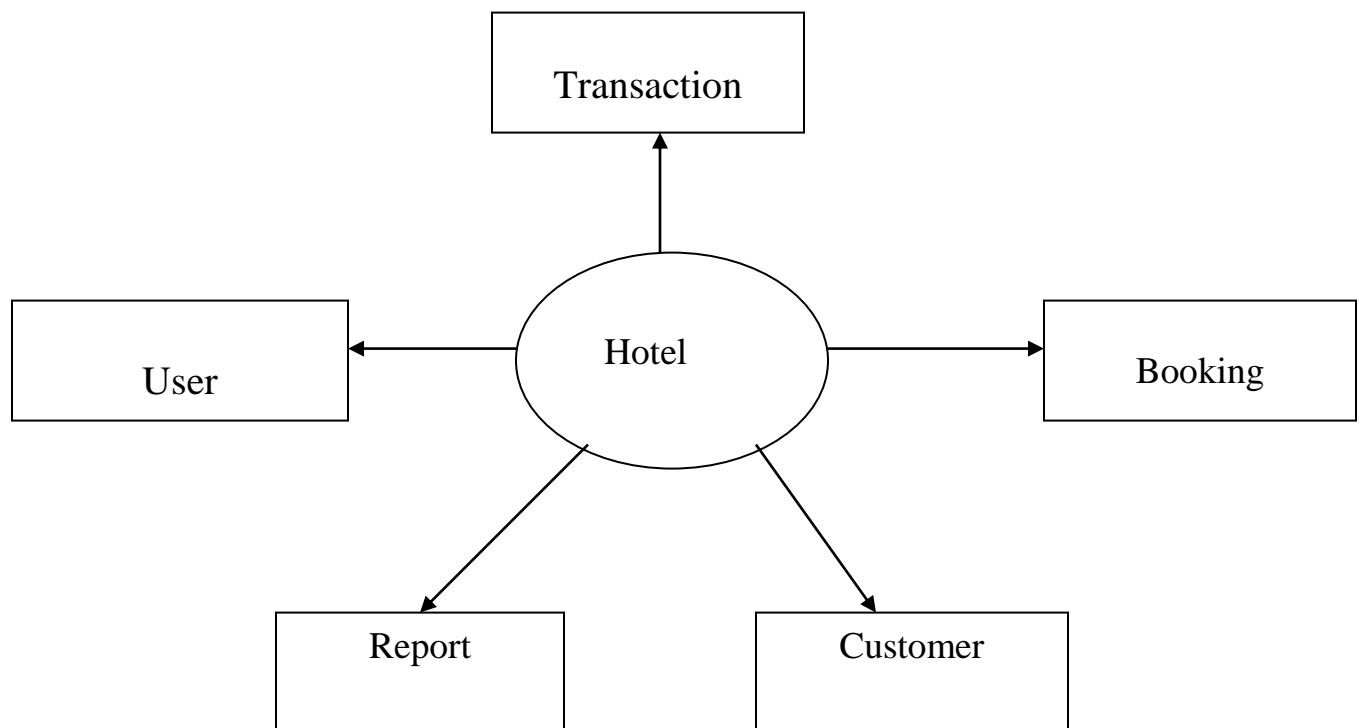

We ensure following by performing white box testing:

1. Guarantee that all independents path within a module exercised at least one.
2. Exercise all logical decision on their true and false sides.
3. Execute all loops at their boundary.
4. Exercise internal data structure to ensure validity.

By performing glass box testing, we achieved code optimization by removing unnecessary codes.

DFD

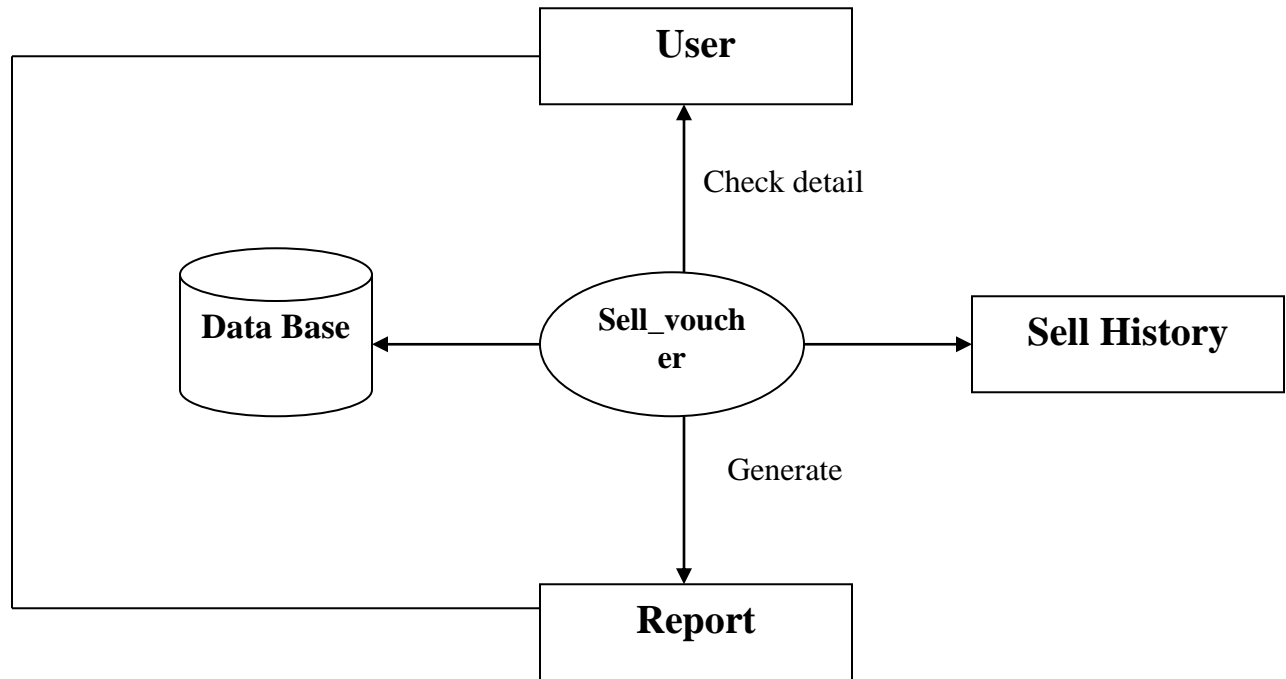

I) DFD on Guest House Management

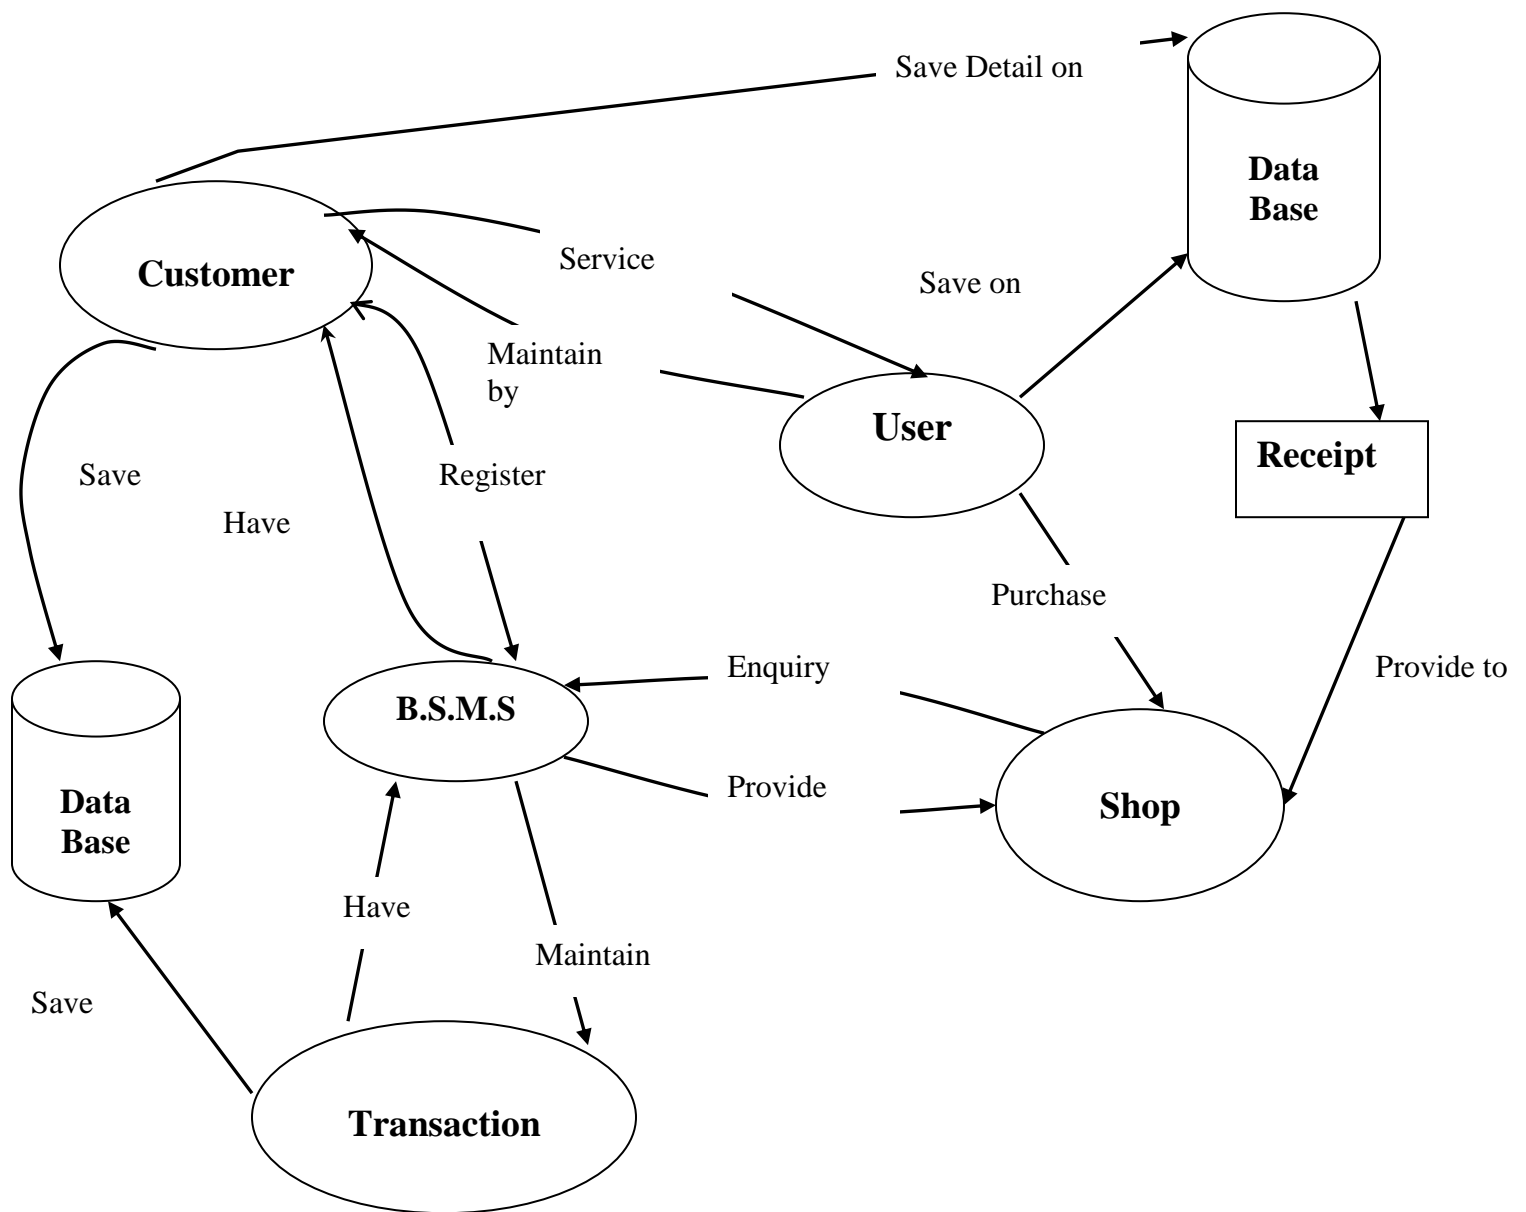

II) DFD ON CUSTOMER TABLE

III) DFD ON Commition:

ER Diagram

I) Entity of Guest House Management:

Login, Bill Payment, Booking, BookingProduct,
Customer,Product,Room,Staff,StaffPay

II) Attributes Entities and their structure

- a) login (user,pass);
- b) Customer (cid, CustomerName, Phone, Email, Address, DOB, DocumentName, DocumentID, CreatedDate);
- c) BillPayment (ID, CID, BID, BillFor, Amount, Remark, PayDate);
- d) Booking (ID, CustID, RoomID, CheckInDate, CheckOutDate, Status, AmountPay, Remark);
- e) BookingProduct (ID, CustID, ProductID, AmountPaid, Remark, Qty, BookDate, PaymentDate, Status);
- f) Customer (ID, CustomerName, Phone, Email, Address, DOB, DocumentName, DocumentID, CreatedDate)
- g)Product (ID, ProductName, Price)
- e)Room (ID, RoomType, Info, Price, Qty)
- e) Staff (ID, StaffName, Phone, Email, DOB, Address, DocumentID, CreatedDate)
- f)StaffPay (ID, StaffID, Description, Amount, CreatedDate)

III) Entity and their relationship

- 1) Relationship between Customer Guest House & Customer

2) Relationship between Bill & Bill details

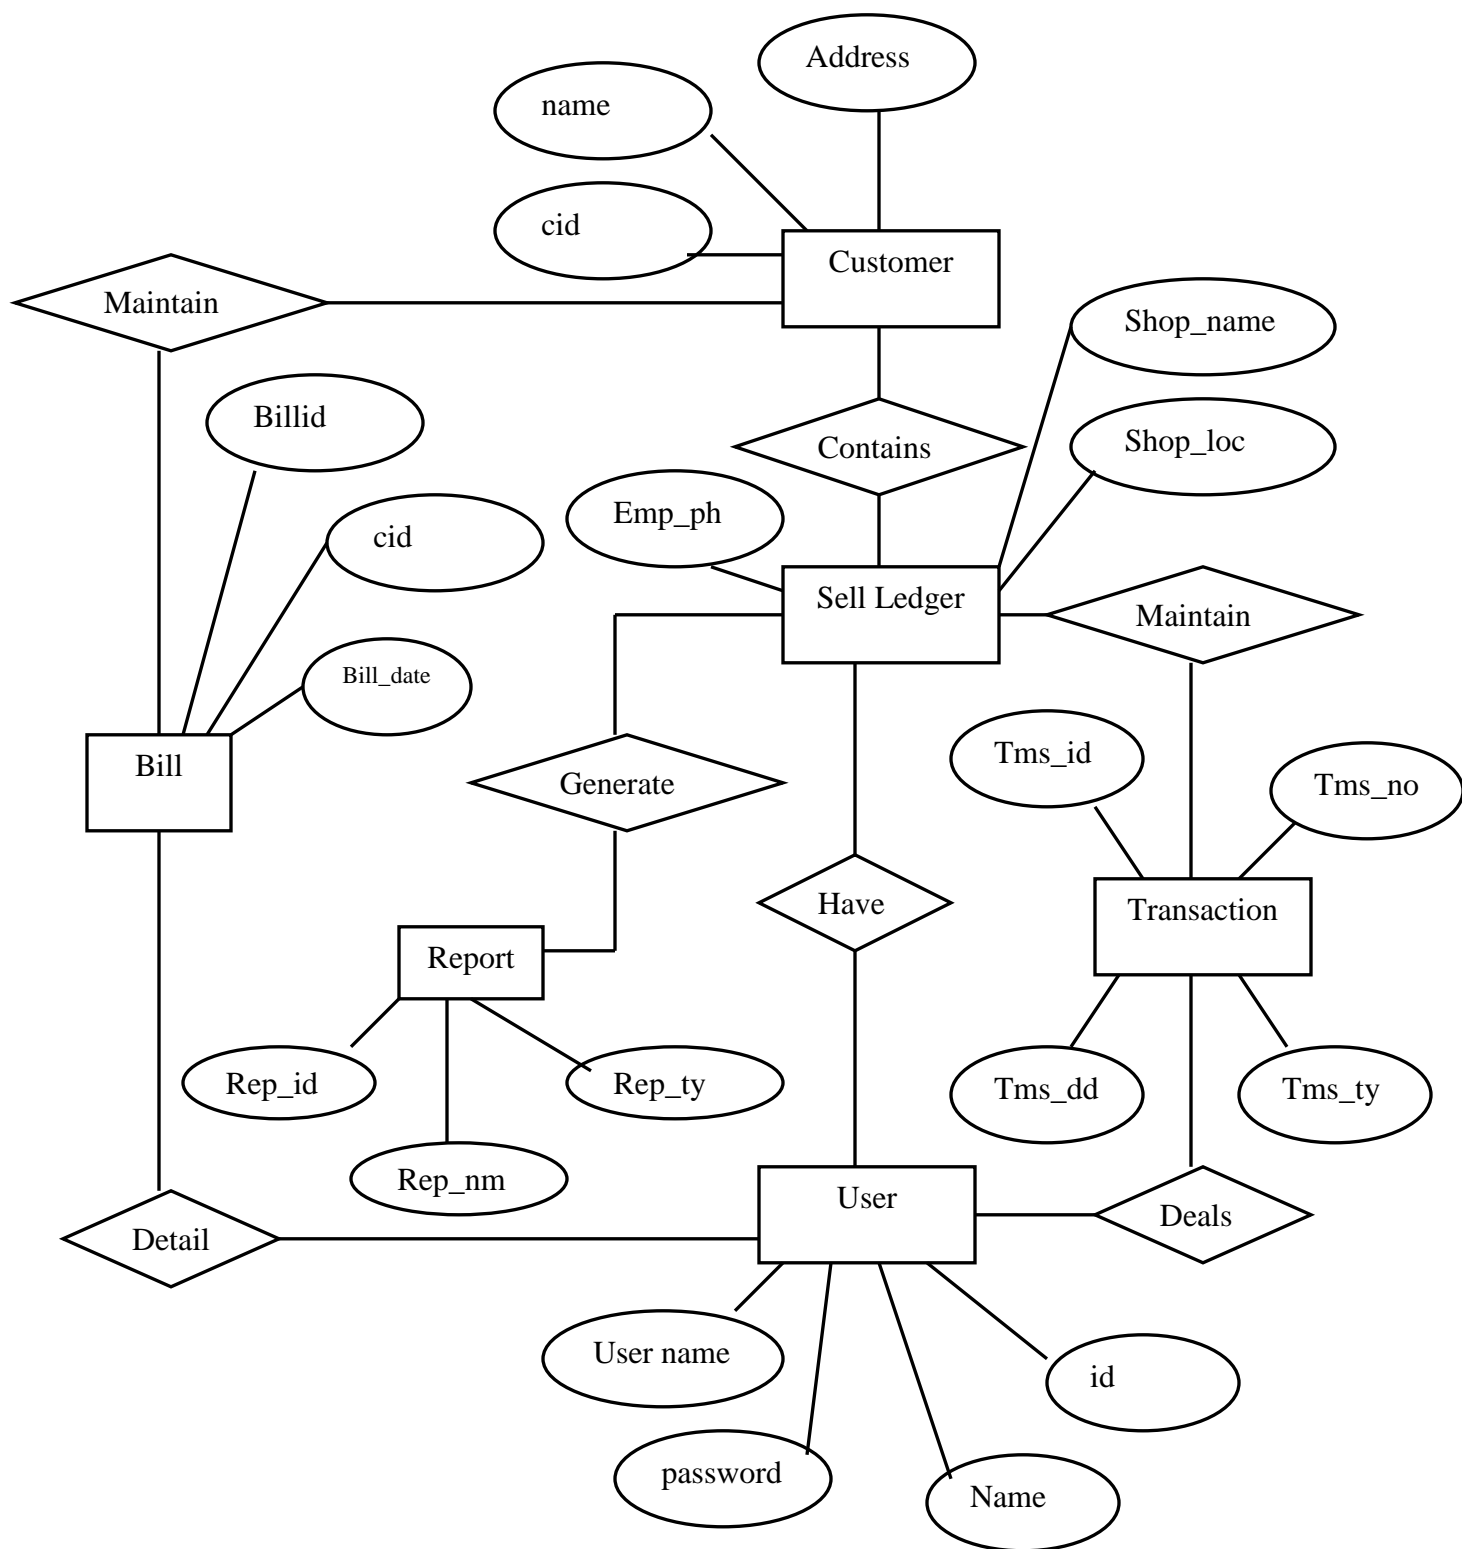

3) Relationship between user & sell record

4) Relationship between Product & unit

The screenshot shows a software window titled "Hotel Management" with a menu bar containing "Master", "Entry", "Booking", "Payment", "Setting", and "Report". Below the menu bar is a toolbar with icons for printing, saving, and other functions. The main content area displays a "Product Payment Invoice" for "Guest House Management". The invoice details are as follows:

Customer ID :	2
Customer Name :	amit
Bill Date :	01-Sep-21
Product Name :	one
Price :	125
Quantity :	2
Total Amount :	240
Remark :	Payment done

Password Change

44

A screenshot of a 'Password Change' dialog box. The dialog box has a title bar with the text 'Password Change' and a close button. Below the title bar, the text 'Password Change' is displayed in a large font. There are three input fields: 'Current Password', 'New Password', and 'Re-Enter Password'. At the bottom, there are two buttons: 'Change' and 'Cancel'. The dialog box is centered on a light blue background that features a stylized illustration of the Burj Khalifa on the left and the word 'Ment' on the right.
